Project Description:

Report Period: Monday to Saturday

Project Status

Date	Task Done	Explanation	Visited Office
05-01-2026	Shortcut for CRUD Operation / Search Functionality in CRUD	Learned and implemented shortcuts for performing CRUD operations efficiently in ASP.NET MVC. Also implemented search functionality within CRUD to filter and retrieve records dynamically from the database.	☒
06-01-2026	Uploading & Retrieving Images from Database / CRUD with Images	Studied methods to upload images and store them in the database. Implemented image retrieval and display functionality along with CRUD operations using Entity Framework and MVC.	
07-01-2026	Updating Entity Data Model / Signup, Login, Logout / Session / Filters / Exception Handlers	Updated entity data models and applied migrations. Implemented user signup, login, and logout functionality using session management. Learned and applied filters and exception handling techniques in MVC.	

08-01-2026	Authorize Filters / Result Filters / Output Cache / AJAX / AJAX Helpers / Ajax.BeginForm()	Studied authorization filters to restrict access based on roles. Learned result filters and output caching for performance optimization. Implemented AJAX concepts using AJAX helpers and Ajax.BeginForm() for partial page updates.	☑
09-01-2026	Ajax.BeginForm() [P3] / Ajax.ActionLink / Load Data using AJAX / jQuery / Multiple Models / Dropdown Binding	Implemented advanced AJAX features including Ajax.BeginForm() and Ajax.ActionLink. Loaded data asynchronously using AJAX and jQuery. Displayed multiple data models in a single view and bound dropdown lists dynamically from the database.	☑

Summary:

- Implemented efficient CRUD operations with search functionality to improve data management and user experience in ASP.NET MVC applications.
- Learned to upload, store, retrieve, and display images from the database while performing CRUD operations using Entity Framework.
- Implemented user authentication features including signup, login, logout, and session management, along with updating entity data models.
- Applied MVC filters, AJAX helpers, and jQuery to enable secure access control, partial page updates, and dynamic data loading from the database.

Issues:

- Faced issues while storing and retrieving images during CRUD operations, especially with folder paths and database mapping.
- Encountered minor AJAX issues related to partial page updates and data loading.
